NOTICE OF PUBLIC PARTICIPATION MEETINGS FOR THE PROPOSED PERMIAN BASIN – CULBERSON 138 kV TRANSMISSION LINE PROJECT

Oncor Electric Delivery Company LLC (Oncor) is proposing to design and construct a new double circuit 138 kilovolt (kV) transmission line between the existing Permian Basin 138 kV Switching Station, located in Ward County approximately four miles west of Monahans, Texas, and the existing Culberson 138 kV Switching Station located in Culberson County, approximately 17 miles south of the Texas/New Mexico state line and approximately 42 miles west of Mentone, Texas (see associated map).

Oncor is committed to routing the proposed transmission line in a manner consistent with the values of the local communities, the Texas Utilities Code, and the Public Utility Commission of Texas rules and policies. In support of the routing process, Oncor is holding three identical public information meetings to solicit input for use in determining line routing alternatives for the proposed transmission line. URS Corporation (URS), a consulting firm retained by Oncor for the project, has identified preliminary alternative transmission line routes for consideration, which are shown as dashed lines on the map. Maps with greater detail will be exhibited at the meetings. Individuals attending these “come and go” open house meetings will have an opportunity to ask questions and provide comments to representatives and technical experts from Oncor and URS regarding the routing of the proposed transmission line. These preliminary alternative routes are subject to modification based on information received at these public meetings and further studies. If you have any questions concerning the meetings, please contact April Pinkston at (214) 486-7344 or email transmissionprojects@oncor.com. For more information visit our website at www.oncor.com/transmissionprojects/.
