(Please check all that apply)

Special City Ordinances or Other Considerations:

Additional Design Charge --- This charge is made for preparing iterative designs to provide new service to a specific location where such iterations are at the request of the Retail Customer / CR for the Retail Customer's sole benefit. The initial two designs on a project will be included in the system charges; any additional designs will be done at Retail Customer's expense pursuant to this charge.

It is the responsibility of the developer to clear rights-of-way, establish final grade and provide staking of property corners prior to the installation of Company facilities. Developer is also responsible for staking, exposing or otherwise marking any existing facilities where Oncor Electric Delivery Company would need to use caution in digging.

A survey or plat will be required by the Oncor project manager. An easement for the onsite Oncor facilities will be required either by a final plat or by a separate instrument. A copy of the warranty deed will be required if a separate instrument is secured for the Oncor easement.

All meters shall be located outside the building, cannot be located within an enclosed area, and must meet proper clearance requirements. Please visit the Oncor Electric Delivery web site for information concerning electric service guidelines, approved meter-bases and other service installation requirements. http://oncor.com/electricity/construct/guidelines/const_guide.aspx
