

Subject: AGREEMENT FOR SUBTRACT METER

Revision Date: June 25, 2018

An AGREEMENT FOR SUBTRACT METER ELECTRIC SERVICE can be executed at Oncor Electric Delivery's sole discretion to serve a petroleum industry customer via the electric facilities of another petroleum industry customer operating private distribution lines in the area. This agreement is typically advantageous when it is not practical or economical for the customer to have Oncor Electric Delivery provide service through Oncor's own distribution lines due to the distance of the proposed subtract meter customer from existing Oncor lines. Eligibility for consideration for subtract meter electric service is dependent on the following criteria:

- a. Subtract meter customer loads cannot exceed 200 amps and must be served with a self-contained meter.
- b. Subtract meter customer voltage must be 3-wire, 3-phase Delta 480V
- c. The master meter customer receiving service from Oncor must be a petroleum industry customer.
- d. The subtract meter customer must also be associated with the petroleum industry.
- e. No subtract meter customers will be permitted within the city limits of any incorporated city or town.

The subtract meter customer must execute the three-party Agreement for subtract metering and contact Oncor Electric Delivery before making any arrangements for this type of service.

As this service is discretionary in nature, Oncor reserves the right to modify or discontinue offering subtract meter electric service to new loads at any time.
